

FOR IMMEDIATE RELEASE

New Mist Collector Features 99.7% Capturing Efficiency

Schaumburg, IL, October 11, 2011 – With its patent-pending diffusion cone and dual filters, the new Amano MZ-15 Mist Collector from Vega Tool Corporation features a 99.7% capturing efficiency of 2µm particles. Its high-efficiency motor and low consumable costs allow the MZ-15 Mist Collector to provide the best cost-performance of any filtration style mist collector available today.

Assembled in Sparta, North Carolina, the Amano MZ-15 Mist Collectors utilize premium-efficiency, NEMA-compliant 1hp (0.75kW) motors. These motors help the MZ-15 to achieve a collection capacity of up to 460 cubic feet per minute (13 cubic meters per minute), while consuming far less energy than similarly powered models. Additionally, these motors operate at a low noise level of less than 72db.

The Amano MZ-15 Mist Collector has a compact design and can be mounted directly on virtually any machine tool. These mist collectors are ideal for a wide variety of filtering applications including machining centers, lathes, EDMs and grinding machines.

Designed for quick maintenance, filter replacement on the MZ-15 can be completed in less than a minute without tools or removing the mist extraction duct hose. Each new unit comes with two sets of primary and secondary filters, which can be washed with water and re-used to further reduce the overall operating costs.

Vega Tool Corporation is the exclusive North American distributor for Amano Mist Collectors, including the MZ Series Filtration Style and MJ Series Filterless Style models. For more information on Amano Mist Collectors or any Vega Tool Corporation product, please call them at 800-228-2969 or visit www.vega-tool.com.
